

FAMIX

Advanced solution for local feed producing

Compact design

Fast installation

Turnkey solution

- No surprise costs
- Minimized safety risks on site
- Accurate schedule

Next generation ■ Energy efficient
Modular feedmill solutions

FAMIX

The farm mixing line is a complete, ready to use solution for livestock farms. It is designed to facilitate the cost efficient production of animal feed from ingredients on the farm, to be complemented with supplementary components. Thermally insulated line is weatherproof and can be built directly on a compact gravel bed.

The farm mixing line enables the industrial and flexible production of feed on the farm whenever you need it. In addition to this, feed recipes can be easily adapted to the specific needs of each farm.

The line is quick to install, ready to use, and well-tested to ensure the logic-controlled dosing, grinding and mixing of raw materials. Operating the mixing plant does not require any manpower, as the line can operate independently.

The continuous production process enables the production up to 10,000 kg of complete feed per hour, depending on the selected recipe.

FaMix is designed for the efficient production of animal feed on larger farms or for shared use by several farms.

FaMix feed mills are designed and manufactured in Finland, with the finest Finnish expertise and equipment, using solutions designed and tested for industrial use.

Benefits:

The fastest and simplest implementation on the market

- Turnkey solution
- Unique containerized structure
- Process and buildings combined
- Weatherproof construction
- Devices are pre-assembled
- Tested before shipment
- "Plug and Play" – Short Start-Up Time
- Computer controlled process
- Customized for each client
- Extremely short payback time
